FACILITY MAILING ADDRESS

111 N. Hope Street
Los Angeles, CA 90051

PROJECT DESCRIPTION:

The City of Los Angeles - Department of Water and Power (LADWP) owns and operates the Harbor Generating Station (HGS) located at Fries Avenue at A Street, Los Angeles, near Terminal Island. HGS is a natural gas fueled steam generated electric power production facility. By January 22, 2001, LADWP expects to commence excavation and construction of five gas combustion turbines and electrical distribution towers at the HGS. Dewatering will be necessary to maintain dry conditions for construction activities.

VOLUME AND DESCRIPTION OF DISCHARGE:

Depending on dewatering operations and construction activities, groundwater from dewatering activities will be pumped to the storm drain on either A Street or Fries Avenue (Latitude: 33° 46' 07", Longitude: 118° 15' 50"). The waste will then flow to Slip No. 5 in the Inner Los Angeles Harbor, a water of the United States. The discharge rate is estimated to be approximately 10,000 gallons per day (gpd).

FREQUENCY OF DISCHARGE:

LADWP expects that the discharge will be continuous and that dewatering efforts will be completed by June 2001.

REUSE OF WATER:

There are no feasible reuse options for the water. Therefore, the groundwater will be discharged to the storm drain.
